

Minutes Of Meeting KeePassXCIPFS (20191016)

Today's meeting was taking place after a month as I was working on the coding part I had certain issues with regarding the application. Firstly, I was not able to upload .kdbx file format to IPFS and as an alternative I asked whether I can import it as csv sheet and then upload but Dr.Mateti said that doing so would leave us with no meaning as we would be compromising security and the password manager will be of no use thereafter. He also suggested me to look at keeshare feature in Keepassxc for sharing selected passwords. IPFS was working completely fine. Nucypher has certain issues as it was working fine on localhost but to connect ursula network I needed a wallet so Dr.mateti said that for demonstration purpose it will be fine to make it work on localhost. He suggested me to have a look at nucypher forum and edit the changes and come back next week.
