Minutes of Meeting(06/02/19)

The meeting involved discussion on Independent study as well as the capstone project. It started with remarks on work progress and reasons for not being able to complete the work in time. It was followed by discussing the understanding of different some concepts one of them being proxy reencryption and then Sir explained me how all different technologies namely NuCypher and IPFS will be combined with Keeepassxc. IPFS will be used as a storage mediumm on the decentralized which will also serve the purpose of node synchronization while NuCypher will be used for proxy-reencryption. The target for next week will be to demonstrate any 3 applications form the NuCypher Hackthon. Sir also suggested me to learn and use latex for report writing as it would really be helpful in structuring the report properly. Next plan after application demontration would be to complete the draft report as early as possible for the Independent study and then continue to work on capstone project and to successfully complete the capstone project in fall semester.
