Minutes Of Meeting
(20190813)

The meeting involved discussion on on correction of Term paper fort the independent study and resubmitting it with corrected errors. Dr. Mateti also recommended me focusing more on Capstone project and completing it as early as possible. Next focus will be creating Lab reports on Decentralized applications. Once the lab reports are ready I need to generate UML diagrams for KeePassXCIPFS. Parallel to this I also need to install and implement Brig which is synchronization tool and will be useful in two-way synchronization of the nodes. For this I will be using the free unixapps1@wright.edu server and also need to register for node on TOR. Some remarks during the meeting included working more efficiently, creating regular journals as well as minutes-of-meeting. To get a better grade in the Capstone project I need to work more harder.
